

Air Bookings Link & Quality Control Report-

This report allows one to specify Air only bookings, Air bookings and other included bookings, or Air bookings with missing bookings. The report groups the booking by record locator so that if more than one invoice was created for the record locator, all invoices are displayed. If a record locator does not exist in the invoice, the report will sort the bookings in invoice number order then by the remaining record locators.

The report requires an Invoice Issue Date range be input in order to run.
